

Microsoft 365 Backup & Restore

Your Cloud. Our SaaS. All-Around Protection for Your Microsoft 365 Assets.

Comprehensive Backup

- Platform Protection Unlimited backup of content in Microsoft 365—including Microsoft 365 Exchange Online, SharePoint Online, Project Online, OneDrive for Business, Groups, Teams, Yammer, Planner, and Public Folders.
- Automatic Backup Your environment is protected from the moment you activate the product. Robust capacity options ensure your backup process starts automatically and runs up to four times a day (or every 6 hours).
- Flexible Backup Schedules Offer options to lower the backup frequency and set the time for the first backup at your own discretion, giving you more control over the scheduled change windows throughout the day.
- Storage on Your Terms Store backups in our scalable Azure Storage or any data center of your choice with support for Microsoft Azure, Amazon S3, Amazon S3-Compatible Storage, Dropbox, and any data destination accessible via Secure File Transfer Protocol (SFTP) and File Transfer Protocol (FTP).

- Multi-Geo Support Backup data can be stored, retained, processed, security trimmed, and managed entirely in-country and in your own storage, guaranteeing data security and sovereignty.
- **Backup Configuration** Near-zero configuration for daily backup plans. Specify the scope you want to protect, and we'll handle the rest.
- Backup Status Have a full view of your protection across Microsoft 365 Exchange Online, SharePoint Online, Project Online, OneDrive for Business, Groups, Teams, Planner, Yammer, and Public Folders, all in one platform.
- Backup Overview View details of the four most recent backups via an easy-to-read report dashboard including job status, time finished, total number of successful/failed/slipped items, and suggestions for how to remediate issues.
- Retention Policies Leverage long-term retention policies out-of-the-box or define custom retention terms for respective Microsoft 365 workplaces to preserve data based on your corporate policies.

Powerful Data Recovery

- Granular & Full-Fidelity Restore On-demand, granular recovery of Microsoft 365 content – including mailboxes, conversations, recordings, private channels, projects, tasks, calendars, sites, libraries, files, Groups, Teams, and Planner – to the online or offline storage location of your choice while maintaining all metadata and permissions.
- Out-of-Place Restore Restore content and conversations to mailboxes, sites, OneDrive, Teams or Groups– not just its original home.
- Offline Restore Export files, mail items, conversations—including Teams' Files and Channel Conversations—directly to a local storage.
- Security Rollback Granular restore doesn't just mean an individual document or version—perform security roll-backs to undo unintended permissions changes.
- Simple Search Quickly identify content for restore based on properties—including content type, owner, date created, file size, parent list name, parent folder name, email subject, date sent, and more.
- Global Search Search backup data across all sites or mailboxes even if you don't know the service type of the lost content.

- Object-based Restore Directly locate business-critical files or emails by utilizing the full-text search capability for rapid discovery.
- **Point-in-Time Recovery** Recover quickly with time-based restores using a simple and intuitive calendar interface.
- **Conflict Resolution** Provide intelligent conflict resolutions at different object levels, to ensure the most authoritative copy of content is recovered without interrupting normal business operation.
- **Restoration Overview** Review restoration details during a specific period via an intuitive circle chart report.
- **Delegated Access** Delegate restores to lower-level administrators and power users in Cloud Backup by any Microsoft 365 scope.
- ReCenter Portal A self-service, simplified portal where end users can easily locate and restore lost, personal data in Exchange Online and OneDrive for Business without burdening IT.
- End User Restore AVA, AvePoint's Virtual Assistant, is a chatbot that was designed to automatically responds to end users' chat requests to recover and restore lost content. Monitor AVA's activities via AVA Admin Reports.

Centralized Management & Security

- Job Monitoring Track, manage, and report on all backup and restore processes through a centralized management console to monitor and enforce compliance with Microsoft 365 policies.
- User Activity Auditing Gain full visibility of how your backup and restore service is being used by auditing user actions, such as changing backup scope, altering system settings, or downloading a report.
- Data Encryption Further safeguard your data from cyberattacks or leakage by bringing your own Microsoft Azure Key Vault Encryption Key to meet compliance regulations around sensitive data.

- Email Notification Receive advanced email notifications with a detailed summary of backup and recovery information.
- Deletion of User-Generated Content Enable the ability to find, select and delete users' Microsoft 365 Mailbox, OneDrive, SharePoint sites, Groups, and Teams backup data to meet "Right-to-be-Forgotten" rule under the EU GDPR Article 17.
- Ransomware Protection Monitor your daily changes, detect unusual activities as well as potential ransomware attack events at an early stage, investigate the issue preemptively, and quickly restore from a good backup point with ease.
