

Globally Redundant, Resilient SaaS Solutions

Switch to AvePoint Cloud Backup for Microsoft 365. #1 Alternative, 100% Reliable

Cyberattack risks continue to rise.

Data breaches and ransomware hits can land companies in regulatory trouble and open them up to class action litigation. This emphasizes the need for robust cybersecurity practices and preparedness programs.

How can businesses build resiliency?

Even with the best security training, you need to be prepared for the “one person who clicked.” Prepare by backing up your data early and often. Products like AvePoint Cloud Backup can provide early warning signals through detection of anomaly and encryption – even for attacks that stretch over the course of weeks or months. Cloud Backup also provides reporting that allows administrators to determine impacted scopes, which could greatly help to shorten investigation and restore time.

The bottom line: security is about mitigating risk. Even with all the strict security measures put in place, the risk of getting hit by ransomware attacks are never zero, and it is always better to be prepared than be complacent.

Hyperscale SaaS Platform

AvePoint’s cloud backup solution protects 100 PB. More than 9 million cloud users rely on our full suite of solutions to make them more productive, compliant and secure.

Whether you’ve got 10 or tens of thousands of users, we’ve got your backup.

Our SaaS platform is available in over 14 data centers globally, enabling our partners and customers to scale and support data sovereignty requirements. Backups run up to 4x a day, are encrypted by default, and are stored for the life of your contract in your own or our built-in storage.

Azure Protection Coming Soon!

Choose Wisely

Not all backup solutions are created equal. When it comes to finding the best backup solution, ensure that it does not disrupt productivity and collaboration for your users. At AvePoint, we believe data is more powerful, when protected. AvePoint offers powerful data recovery options that are superior to other backup solutions.

Learn why we were named a Leader in The Forrester New Wave™: SaaS Application Data Protection Report 

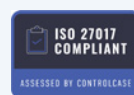

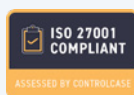

“ For us, the main reason was fast development, fast restores, reliability, and an easy-to-use interface. We have all of that within AvePoint’s product. Cloud Backup’s compatibility with new M365 services and functionality updates means MSPs can offer swift, comprehensive protection. ”
