

Step 1: Bob, your employee, has just hired a new worker, Suzy, who needs to be added to a select number of Bob’s team collaboration spaces.

Step 2: Bob logs into Cloud Governance and sees a predefined list of available options to choose from.

Bob locates the “Grant Permissions” service request option and starts a new permissions management request.

- Content Management**
- Copy Content
 - Move Content

- Lifecycle Management**
- Archive
 - Delete
 - Move

- Permissions Management**
- Grant
 - Revoke
 - Clone
 - Transfer

- Provisioning**
- New Space
 - New User

Step 3: Bob then chooses an existing teammate’s user profile from within his company’s Active Directory to clone their permissions.

From across his collaboration spaces, Bob then chooses all of the locations where Suzy will need permissions.

Step 4: Bob service request is then sent for approval from Bob’s manager. Bob’s manager approves his request.

Step 5: Cloud Governance provisions the new space automatically, without ever having to burden your IT staff.

Bob & Team

Expedited on-boarding of new users to their IT system.

Governance Board

Appropriate permissions automatically applied to the new user.

IT Administrators

Less time spent servicing user requests and more time focusing on higher business value activities.
